Brainstorm & Idea Prioritization :

Project Title: Heart Disease Analysis

Brainstorming created a collaborative environment where team members generated innovative ideas to address challenges in analyzing heart disease data. The goal was to explore multiple analytical and visualization possibilities before selecting the most impactful healthcare insights solution.

Step 1: Team Gathering, Collaboration & Problem Selection

Selected Problem Statement

Healthcare professionals and hospital administrators lack a centralized and interactive platform to analyze heart disease risk factors, patient demographics, and clinical trends.

Although patient health data exists (age, cholesterol, blood pressure, heart rate, etc.), it is often scattered, complex, and difficult to interpret. This limits effective early diagnosis, risk identification, and preventive healthcare planning.

Discussion Summary

- Heart disease data is available but lacks clear visualization.
 - Risk factors such as cholesterol and blood pressure need comparative analysis.
 - Age and gender distribution patterns require deeper understanding.
 - Identification of high-risk patient groups is essential.
 - Healthcare professionals need clear KPI-based dashboards for faster decisions.
 - Filters and interactive features are necessary for better analysis.
-

Step 2: Brainstorming & Idea Generation

Idea Listing (Unfiltered)

1. Create Age-wise Heart Disease Distribution Chart
2. Compare Heart Disease Cases by Gender
3. Identify High-Risk Patients Based on Cholesterol Levels
4. Analyze Blood Pressure vs Heart Disease Correlation
5. Visualize Chest Pain Type Distribution

- 6. Show Maximum Heart Rate Analysis
- 7. KPI Cards for Total Patients, High-Risk %, Avg Cholesterol
- 8. Risk Factor Comparison Dashboard
- 9. Story-Based Clinical Insights Dashboard
- 10. Correlation Matrix of Major Health Indicators
- 11. Smoking & Heart Disease Relationship Analysis
- 12. Yearly Trend of Heart Disease Cases (if time-series data available)

Idea Grouping

Category	Ideas
Demographic Analysis	Age distribution, Gender comparison
Risk Factor Analysis	Cholesterol, Blood pressure, Smoking
Clinical Indicators	Chest pain type, Max heart rate
Comparative Analysis	High-risk vs low-risk patients
User Experience	KPI cards, storytelling dashboard
Advanced Insights	Correlation analysis, predictive modeling

Step 3: Idea Prioritization

- Ideas were prioritized based on:
- Impact (High / Medium / Low)
 - Feasibility (Easy / Moderate / Complex)
 - Time Requirement

Step-1: Team Gathering, Collaboration and Select the Heart Disease Problem Statement

Start by assembling your team and agreeing on the problem you'll focus on solving in this brainstorming session.

1 Step-1: Gather & Define

Team Members:

Sanampalli Pavankalyan (Team Leader)
Team Leader

Shaik Farukh Ahamed
Data Analyst

Shaik Hydar Vali
Data Analyst

Shaik Sumiya
Data Analyst

Goals for session:

- ✓ Identify relevant heart disease data visualizations
- ✓ Decide key KPIs for clinical reporting
- ✓ Plan Heart Disease Dashboard & Story design

10 minutes to define who participates, set goals, and clarify the problem.

2 Brainstorm, Idea Listing and Grouping

Generate and group ideas to tackle the problem. Use sticky notes for all ideas, then cluster them into related categories.

Idea Listing:

- ✓ High-Risk Patient Identification
- ✓ Demographic & Age Analysis
- ✓ Cholesterol & Blood Pressure
- ✓ Lifestyle Risk Factors

Tableau Dashboard Features:

- Filterable Dashboard
- KPI Cards

Group & Categorize Ideas:

- ✓ Clinical Indicators
- ✓ Demographic Segmentation
- ✓ Risk Factor Analysis
- ✓ Preventive Strategies

Power BI Dashboard Features:

- Interactive Charts
- Customizable Visuals

Power BI Dashboard Features:

- Interactive Charts
- Customizable Visuals

Step-3: Idea Prioritization

Idea Prioritization

30 minutes to brainstorm and jot down all ideas with impact and feasibility.

Priority Matrix:

- ✓ High Impact & Easy
- ✓ High Impact & Complex
- ✓ Low Impact & Easy
- ✓ Low Impact & Complex

20 minutes to prioritize and select ideas based on impact and feasibility.

Selected high-impact, feasible

ideas to focus on now including High-Risk Patient Analysis, Age & Gender Comparison, Cholesterol. BP Correlation, KPI Cards for Heart Disease Dashboard
