Empathy Map Canvas:

An empathy map is a simple, easy-to-understand visual tool that captures insights about a user's behaviors, challenges, and needs.

The primary user of the **Heart Disease Analysis Dashboard** is a healthcare professional, hospital administrator, or public health researcher who needs to monitor heart disease risk factors, patient demographics, and health trends efficiently. The user often works with large volumes of raw, unstructured medical data and lacks a centralized visual platform to clearly analyze patterns such as age distribution, cholesterol levels, blood pressure variations, and the correlation of risk factors with heart disease outcomes.

Due to the absence of interactive and visual analytics, the user may feel uncertain and overwhelmed when identifying high-risk groups or making data-driven clinical and strategic decisions. They require a comprehensive, user-friendly Tableau dashboard featuring clear KPIs (such as total patients, percentage at risk, average cholesterol, and blood pressure levels), trend analysis, demographic segmentation, and filtering options to transform raw medical data into meaningful insights. This enables better diagnosis support, preventive strategy planning, and informed healthcare decision-making related to heart disease management.
